- (1) Modern Standard Arabic (Al Khalaf 2015, 137, (301a))

qadam-at at-tilmiiḏ-ah wa at-tilmiiḏ al-imtiḥan  
take-3F.SG the-student.F.SG and the-student-M.SG the-test

‘The student (female) and student (male) took the test.’

# Asymmetries in Coordination: Selection

- (2) a. You can depend on my assistant and that he will be on time.  
(Sag et al. 1985, 165, (124b))
- b. \* You can depend on that my assistant will be on time and his intelligence.

Previous analyses of asymmetries in coordination have posited a special status for the first conjunct.

- Conjunct Agreement:
  - 1 Exceptional Government (Munn 1999)
  - 2 Late Merge (Soltan 2006)
  - 3 Late Labelling (Larson 2013)
- Selection: feature transference (Johannessen 1996; Zhang 2010)

# New Facts: Closest Conjunct Agreement

Final conjuncts can also control agreement (Marušič et al. 2007, van Koppen 2007, Benmamoun et al. 2009, Bhatt and Walkow 2013):

(3) Slovenian (Marušič et al. 2007, 5, (8–9))

a. Včeraj so odšle/\*odšla [krave in  
yesterday AUX went.F.PL/\*went.N.PL [cow.F.PL and  
teleta] na pašo.  
calf.N.PL] on graze  
'Yesterday cows and calves went grazing.'

b. [krave in teleta] so odšla/\*odšle na  
[cow.F.PL and calf.N.PL] AUX went.N.PL/\*went.F.PL on  
pašo  
grazing  
'Cows and calves went grazing.'

# Proposals for Closest Conjunct Agreement

- Marušič et al. (2007), van Koppen (2007), Benmamoun et al. (2009), and Bhatt and Walkow (2013) propose that CCA is valued at PF.
- Assumption: Linear precedence relations are only specified at PF;
- The syntax only includes hierarchical order (Kayne 1994, Fox and Pesetsky 2005, many others).
- CCA must therefore take place at PF, where hierarchical order has been turned into linear order.

We re-examine selectional violations in coordination.

- The last conjunct can also satisfy selectional restrictions.
- Linear order is the factor that determines which conjunct satisfies selectional restrictions.
- Selectional restrictions must be satisfied in the syntax and cannot be delayed until PF.
- It follows that linear order must be part of syntax.
- Adds to evidence from binding, superiority, etc. for the role of linear order in syntax (Bruening 2014).
- (CCA can also be computed in the syntax rather than at PF.)

# Four Cases

- Two coordinate phrases YP and ZP may enter into a selectional relation with X:

- (4) a. X [YP & ZP]  
b. [YP & ZP ] X

- Two selecting elements X and Y may be coordinated and enter into a selection relation with a phrase ZP:

- (5) a. [X & Y] ZP  
b. ZP [X & Y]

- In (4b) and (5a), the *last* conjunct matters.

## Case 1: X [YP & ZP]

- (6) You can depend on [my assistant] and [that he will be on time]. (Sag et al. 1985, 165, (124b))
- (7) a. Pat was annoyed by [the children's noise] and [that their parents did nothing to stop it]. (Sag et al. 1985, 165, (124c))
- b. Pat was annoyed by [the children's noise].
- c. \* Pat was annoyed by [that their parents did nothing to stop it]. (Sag et al. 1985, 165, (125c))
- d. \* Pat was annoyed by [that they were so noisy] and [their inability to sit still].

- (8) a. At one point, she reportedly became [disheartened] and [on the verge of giving up her studies],...
- `http://www.isms.nsw.edu.au/about-montessori`
- b. She reportedly became disheartened.
- c. \* She reportedly became on the verge of giving up her studies.

- (9) a. \* [That he was late all the time] resulted in his being dismissed.  
(based on Pollard and Sag 1987, 131)
- b. [His constant harassment of co-workers] resulted in his being dismissed.
- c. [That he was late all the time] and [his constant harassment of co-workers] resulted in his being dismissed.
- d. \* [His constant harassment of co-workers] and [that he was late all the time] resulted in his being dismissed.

- (10) a. [That Quentin was a werewolf] and [twenty other crazy rumors] were heard by all the students in the department.
- b. \* That Quentin was a werewolf was heard by all the students in the department.
- c. Twenty crazy rumors were heard by all the students in the department. (b and c based on Alrenga 2005, 184, footnote 8)

- (11) a. That she got third place and her injury in the final round notwithstanding, she felt good about her performance in the Olympics.
- b. Her injury notwithstanding,...
- c. \* That she got third place notwithstanding,...

- (12) a. So the fox thought about and decided to carry the scorpion across the river,...
- <http://www.killermovies.com/forums/archive/index.php/t-520314-did-obi-wan-forget-about-leia.html>
- b. The fox decided to carry the scorpion across the river.
- c. \* The fox thought about to carry the scorpion across the river.
- d. \* The fox proposed and thought about to carry the scorpion across the river.

- (13) a. I had hoped and recommended that the school be named in honor of Don Clayton. . .  
[http://www.lampasasdispatchrecord.com/news/2009-02-10/PDF/Page\\_06.pdf](http://www.lampasasdispatchrecord.com/news/2009-02-10/PDF/Page_06.pdf)
- b. \* I had hoped that the school be named in honor of Don Clayton.
- c. I had recommended that the school be named in honor of Don Clayton.
- d. \* I had recommended and hoped that the school be named in honor of Don Clayton.

- (14) a. The Once and Future King (T. H. White, published 1958)  
b. \* the once king  
c. the future king
- Bruening (2010, 2013): Adjuncts select the category of the phrase they adjoin to.
  - APs select projections of N;
  - AdvPs select projections of other categories.

- (15) a. The Once and Future World (\*the once world)  
book title, by J.B. MacKinnon
- b. the twice and future caesar (\*the twice Caesar)  
<http://www.risingshadow.net/library/book/47397-the-twice-and-future-Caesar>
- c. ...that expression can be applied to the thrice-and-future prime minister of Israel... (\*the thrice prime minister)  
<http://www.lobelog.com/too-clever-by-half-netanyahu-strengthens-obamas-hand/>

- (16) a. ...cataclysmic events were pointing to the soon and coming return of the Lord for His church. (\*the soon return)  
<https://books.google.com/books?isbn=1602661790>
- b. The Soon and Coming King (\*the soon king)  
<https://www.youtube.com/watch?v=mVj7D1Ic3D4>
- c. A Soon and Distant Christmas (\*a soon Christmas)  
<http://www.nature.com/nature/journal/v504/n7480/full/504476a.html>

- (17) a. **The Now and Future Kingdom (book title) (\*the now kingdom)**  
<http://www.americancatholic.org/Newsletters/JHP/aq0506.asp>
- b. **The Now and Future Caliphate (\*the now caliphate)**

`http:`

`//www.chicagotribune.com/news/opinion/commentary/  
ct-perspec-hillary-0916-20140915-story.html`

## Case 4: ZP [X & Y]

- (19) a. That images are waterproof cannot be true and is incoherent.  
b. \* That images are waterproof is incoherent. (Pollard and Sag 1987, 131)
- (20) a. That Quentin might be a werewolf was discussed by the Scooby Gang last night and was heard by all his classmates the next morning.  
b. \* That Quentin might be a werewolf was heard by all his classmates the next morning. (based on Alrenga 2005)

- (21) Where  $X$  is an element that a coordinate phrase enters into a selectional relationship with, only the conjunct that is *closest* in linear order to  $X$  must select  $X$  or be selected by  $X$ .

# Table of Contents

  - Coordination Permits Mismatching Categories
- 5 Analysis of Coordination and Linear Order
  - Background
  - Resolving Mismatching Categories in Coordination
- 6 Conclusion
- 7 Further Issues
  - Morphophonological Parallelism
- 8 References

# The Syntax Must Include Linear Order

- Suppose linear order was absent from syntax, at PF hierarchical relations are converted into precedence relations.
- To capture findings, selection would have to be checked or satisfied at PF.
- Linear relations are not what matter for selection, hierarchical ones are:

- (22) a. a brilliant independent thinker  
b. a brilliantly independent thinker

# Linear Order Irrelevant to Selection

- (23) a. # Maria frightens sincerity.  
b. # It's sincerity that Maria frightens.
- (24) a. The Spartans dined on parched corn.  
b. It is only on parched corn that the Spartans dined.  
c. \* The Spartans dined parched corn.  
d. \* It is only parched corn that the Spartans dined.

Semantic selection and categorial selection must be checked at some level of representation other than the level of surface word order.

# The Syntax Must Include Linear Order

- Selection cannot be delayed to PF.
- Selection in coordination refers to linear order.
- It follows that linear order must be specified in the syntax.

# Table of Contents

- 8 References

# Ellipsis Analysis of Category Mismatch

- Wilder (1994): all coordination is either NP coordination or CP coordination;
- All other types of coordination are derived via ellipsis.

(25) John is a republican and proud of it. (NP and AP)  
(Sag et al. 1985, 117, (2b))

(26) [<sub>CP</sub> John is [<sub>NP</sub> a republican ]] and [<sub>CP</sub> ~~John~~ is [<sub>AP</sub> proud of it]]  
(Wilder 1994, 304, (59e))

# Ellipsis Account: Case 1

- For the ellipsis account to capture category mismatch it has to be supplemented with movement:

(27) You can depend on my assistant and [[that he will be on time] ~~you can depend on t~~]

- Movement is known to resolve some category mismatches (e.g., Alrenga 2005, Takahashi 2010).

(28) That he will be on time, you can depend on.

- (29)
- a. [That images are waterproof] and [many of his other pronouncements] are all incoherent.
  - b. \* That images are waterproof is incoherent.
  - c. That images are waterproof I am told is incoherent.
  - d. [That images are waterproof] ~~is incoherent~~ and many of his other pronouncements are all incoherent.

- (30)
- a. That images are waterproof cannot be true and is incoherent.
  - b. \* That images are waterproof is incoherent.
  - c. That images are waterproof I am told is incoherent.
  - d. That images are waterproof cannot be true and [~~that images are waterproof~~] *t* is incoherent.

## Ellipsis Account: Case 2

No application of ellipsis will result in the right order, even after we move the adverb:

(31) *leftward movement, left conjunct elided:*

- a. once ~~the  $t$  king~~ and the future king
- b. once ~~Arthur is the  $t$  king~~ and Arthur is the future king.

(32) *rightward movement, left conjunct elided:*

- a. ~~the  $t$  king~~ once and the future king
- b. ~~Arthur is the  $t$  king~~ once and Arthur is the future king.

(33) *leftward movement, right conjunct elided:*

- a. the once king and future ~~the  $t$  king~~
- b. Arthur is the once king and future ~~Arthur is the  $t$  king~~.

- (34) *rightward movement, right conjunct elided:*
- a. the once king and ~~the~~ *t*-king future
  - b. Arthur is the once king and ~~Arthur is the~~ *t*-king future.

Ellipsis would have to apply to a non-contiguous string that is not a constituent, without movement of the adverb:

- (35) the once king and ~~the~~ future king

Since movement is supposed to be what resolves category mismatch, not even this will help.

# Ellipsis Cannot Account for the Generalization

In order to capture our linear order generalization, the ellipsis account would have to say:

- If the coordinate phrase follows its selector/selectee, ellipsis and movement apply to the second conjunct;

(36) You can depend on [my assistant] and [[that he will be on time] ~~you can depend on t~~]

- If the coordinate phrase precedes its selector/selectee, ellipsis and movement apply to the first conjunct.

(37) [[That images are waterproof] ~~t is incoherent~~] and [the pronouncement he made yesterday] are both incoherent.

- Complete stipulation, no explanation.
- Note also agreement and floating quantifier in (37).

(38) (Sag et al. 1985, 117–118, (2–3))

- a. Pat is a Republican and proud of it. [NP and AP]
- b. Pat is healthy and of sound mind. [AP and PP]
- c. That was a rude remark and in very bad taste. [NP and PP]
- d. Pat has become a banker and very conservative. [NP and AP]

(39) Pat is [<sub>PredP</sub> a Republican] and [<sub>PredP</sub> proud of it].

Not just predicates:

- (40) a. We walked [slowly and with great care]. [AdvP and PP]  
(Sag et al. 1985, 140, (57))
- b. They wanted to leave [tomorrow or on Thursday]. [NP and PP]  
(Sag et al. 1985, 143, (69a))
- c. You can depend on [my assistant and that he will be on time].  
[NP and CP].

# Disjunctive Selection

- Bayer (1996): Selectors can permit several different categories;
- A verb like *remember* is listed in the lexicon as allowing CPs and NPs as arguments;
- As long as all the categories are permitted coordinating different categories is fine:

(41) Pat remembered [the appointment and that it was important to be on time]. (Bayer 1996, 958, (8a))

- Bayer's analysis does not permit selectional violations, wrongly:

(42) a. You can depend on [my assistant] and [that he will be on time].  
b. \* You can depend on [that my assistant will be on time].

- Ellipsis cannot account for all cases of category mismatch.
- Coordination of mismatched categories is allowed by the syntax.

# Background: Coordinate Structure

- Syntax includes linear order: Merge specifies order (Bruening 2014).
- Syntactic structures are built left-to-right (Phillips 2003; Bruening 2014).
- Al Khalaf (2015): Coordinators adjoin to each conjunct, trigger Set Label (Collins 2002).
- Closed coordinator (&<sub>C</sub>) adjoins to initial conjuncts, open coordinator adjoins to others.

# Set Label and Union

- The label of the coordinate as a whole is the union of the labels of the conjuncts.
- Union resolves agreement features (Dalrymple and Kaplan 2000):
- E.g., singular and singular resolve as dual, first and second person resolve as first inclusive.
- In the case of syntactic category, different categories must be resolved to one of the categories.
- We hypothesize that selection must be satisfied immediately when possible and can force immediate resolution;
- Otherwise, when the coordinate is completed, the category becomes the category of the most recently read conjunct (the last one).

# Background: Selectional Features

- Bruening (2013): Heads have selectional features (P[S:N], V[S:P<sub>on</sub>], etc.).
- Selectional features are satisfied when they do not project.
- Selectional features project *unless* the sister of the node with the feature is the right category.

# Selectional Violation

The structure crashes if a phasal node has unchecked selectional features.

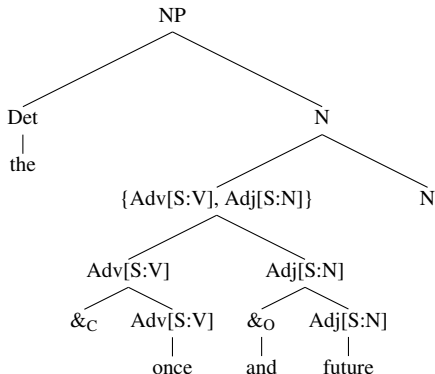

# Example: Adjunct

# Resolving Mismatching Categories in Coordination

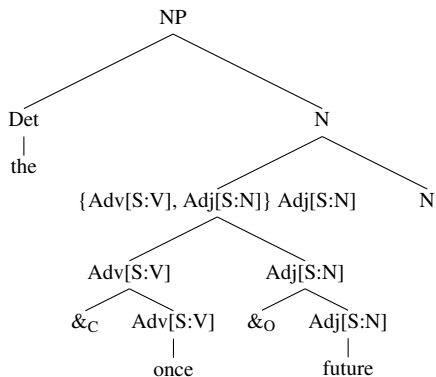

(48) the once and future king

(49) Step 1:

# Resolving Mismatching Categories in Coordination

(50) Step 2:

# Resolving Mismatching Categories in Coordination

(51) You can depend on my assistant and that he will be on time.

(52) Step 1:

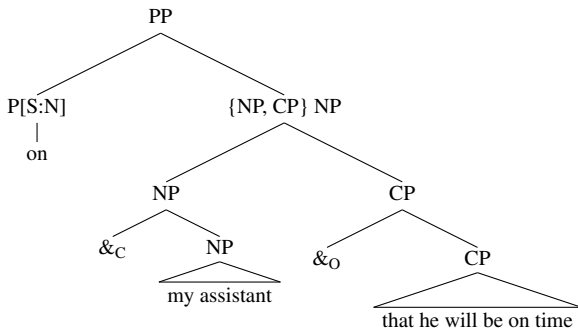

# Resolving Mismatching Categories in Coordination

(53) Step 2:

# Resolving Mismatching Categories in Coordination

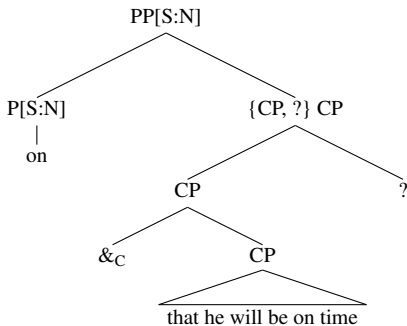

(54) Step 3:

Selection forces immediate resolution:

(55) \* You can depend on that he will be on time and his intelligence.

(56) \* Step 2:

# Incorrect Order

(57) \* the future and soon king

(58) \* Step 2:

# Table of Contents

- 5 Analysis of Coordination and Linear Order
  - Background
  - Resolving Mismatching Categories in Coordination
- 6 Conclusion**
- 7 Further Issues
  - Morphophonological Parallelism
- 8 References

# Conclusion

- The first conjunct does not enjoy special status;
- Agreement, selection, etc. all depend on linear order;
- The last conjunct can also control these.
- Selection cannot be delayed to PF, must be part of syntax.
- To capture linear effects, linear order must be part of syntax.
- Adds to evidence from binding, superiority, etc. for the role of linear order in syntax (Bruening 2014).
- Our account captures the facts using Set Label, resolution, selectional features, all necessary anyway.
- In agreement, there is no need to delay agreement to PF; CCA can be handled in the syntax.

Thank you!

- 7 Further Issues**
  - Morphophonological Parallelism**
- 8 References

# Morphophonological Parallelism

- Our account does not predict the following cases:

(59) a. \* the justly and proud king  
b. \* He always works [carefully and thorough]

- If an adjective is conjoined with an adverb that does not end in *-ly* in postverbal position, the result is much better for many English speakers:

(60) ? He always works [hard and thorough]

- It appears that in coordination, there is a morphophonological matching requirement.

# Morphophonological Matching

- (61) a. \* Ich kenne        und helfe        diesen Mann.  
I know(Acc) and help(Dat) this.Acc man  
'I know and help this man.'
- b. \* Ich kenne        und helfe        diesem Mann.  
I know(Acc) and help(Dat) this.Dat man  
'I know and help this man.' (Müller and Wechsler 2014, 27,  
(24b,c))
- c. Er findet        ud hilft        Frauen.  
he finds(Acc) and helps(Dat) women.Dat/Acc  
'He finds and helps women.' (Pullum and Zwicky 1986, 40)
