Sun Welcomes Your Comments

Sun is interested in improving its documentation and welcomes your comments and suggestions. You can email your comments to Sun at:

docfeedback@sun.com

Please include the part number (806-2956-10) of the document in the subject line of your email.
Powering Off the System

1. Refer to the Sun Fire 6800/4810/4800/3800 Systems Platform Administration Manual for complete step-by-step commands for powering off the domains and the system.

2. If your Sun Fire™ system is not mounted in a Sun Fire cabinet, skip to Step 3. Otherwise, turn the keyswitch on the FrameManager to the off position.

3. Turn off the AC input box(es) (Sun Fire 6800 system shown). If you have a Sun Fire 3800 system, turn off the power supply switch located on each power supply.

4. Turn off the Redundant Transfer Switches (RTSs). If your Sun Fire system is not mounted in a Sun Fire cabinet, skip this step.

Powering On the System

1. If you are working on a system that has RTS modules, turn on the RTS switches. If your Sun Fire system is not mounted in a Sun Fire cabinet, skip to Step 3.
   It will take 30 seconds to one minute for the RTS modules to power on.

2. Check that all of the circuit breakers on each side of the RTU are on.

3. Turn on the AC input box(es).
   The Sun Fire 3800 system does not have an AC input box.

4. Make sure that the rack fan trays are switched on.
   This switch is located in the back of the cabinet, below the power cord socket on each rack fan tray.

5. Turn the keyswitch to the FrameManager to the on position. If your Sun Fire system is not mounted in a Sun Fire cabinet, skip to Step 5.
   Refer to the Sun Fire 6800/4810/4800/3800 Systems Platform Administration Manual for complete procedures for powering on the system.

6. Power on the remaining domains. Complete these steps for each domain you need to power on.
