Adjusting the Leveling Pads

After moving the system to its operating location, lower the leveling pads to raise the casters off the floor.

1. Remove the leveling wrench from inside of the system.
2. Use the leveling wrench to lower the leveling pads at the four corners of the cabinet frame so that the casters cannot roll.
3. (Optional) For additional protection to prevent movement of the cabinet, insert the bolt-down brackets in the slots at the bottom of the cabinet and secure the brackets to the floor.
4. Secure the leveling wrench inside the cabinet with the plastic strap.

Shipping and Storing the System

Save the original shipping container and packing materials in case you need to store or ship your system.

If you cannot store the shipping materials, recycle or dispose of the materials properly. Consult your local recycling authority for information.

Accessing Sun Documentation Online

The docs.sun.com™ web site enables you to access a select group of Sun technical documentation on the Web. You can browse the docs.sun.com archive or search for a specific book title or subject at:

Sun Welcomes Your Comments

Sun is interested in improving its documentation and welcomes your comments and suggestions. You can email your comments to Sun at:

docfeedback@sun.com

Please include the part number (806-7746-10) of the document in the subject line of your email.
Unpacking the Sun Fire Cabinet

1. Remove the bands and cap from the shipping carton.

2. Remove the plastic clips that keep the two main sections of the shipping carton together.

3. Remove the plastic bag that covers the system and remove the ramps.

4. Unlock the rear door of the cabinet with the system keys and remove the leveling wrench that is attached to the upper-rear of the cabinet frame. System keys are attached to either the front or rear door. The wrench is attached by a reusable plastic strap. Do not cut the strap.
   a. Press the plastic tab to unlock the strap.
   b. Loosen the strap to remove the wrench.

5. Remove the rear wheel stop, use the leveling wrench to remove the rear brackets, then replace the rear wheel stop to prevent the cabinet from slipping off the shipping pallet.

6. Remove the front wheel stop, position the ramps using the metal tab that is attached to each ramp, then remove the front brackets.

7. Use the leveling wrench to raise the leveling pads so that the casters beneath the cabinet roll freely.

8. Secure the leveling wrench back in the cabinet with the plastic strap and close the front and rear doors.

9. Slowly roll the cabinet off the shipping pallet and to its operating location.

Note: The brackets can be used later to bolt the cabinet to the floor.

Caution: Three or more people are needed to move the system safely. Two people must control the movement of the cabinet from the sides while the third pushes slowly from the rear. To prevent the cabinet from tipping over, push or pull only along the middle of the cabinet.
