

Research Assistantship (MS or PhD) at the University of Delaware

We are seeking a Master's or PhD thesis candidate to work on a USDA funded international project on sustainable watershed management. The student will be expected to study and evaluate sustainable agricultural management practices implemented in selected watersheds in India. The impact of management practices on water, soil, and environmental quality will be determined. The student will synthesize this information for his/her research as well assist in developing an online course highlighting these practices. The student will be located at the University of Delaware in Newark, DE but will be expected to visit India for a short period of time (1-2 weeks). The student will compete for Bioresources Engineering departmental assistantships and other assistantships available through the ISEQ program at the University of Delaware. Assistantships include an annual stipend and tuition waiver. Students should have a strong background in watershed hydrology, water quality, and/or soil science. For further information contact - Dr. Shreeram Inamdar, 264 Townsend Hall, 531 S. College Ave. Newark, DE 19716 (email: inamdar@udel.edu; Phone: 302-831-8877. If contacting via email please include - CV, list of courses taken and any publications, GPA and GRE scores and names of three references.
