NAME
nrmsbsplan – Prepares a NetWorker Recovery Manager client for remote boot procedure from a different subnet.

SYNOPSIS
nrmsbsplan -c client -n boot_server_dir -N NRM_Server:/boot_image_dir

DESCRIPTION
nrmsbsplan prepares the specified machine, for remote boot procedure used during disaster recovery. see (nrmrestore(8)).

This command must be executed from the Solaris Subnet Boot Server, once for each client on that subnet, after completing installation of NRMclnt on NetWorker Recovery Manager client. After executing nrmsbsplan for each client nrmgatherdata can be run on a regular basis.

OPTIONS
-c client
   Name of the client which is to be protected from disaster.

-n boot_server_dir
   The name of the directory containing the boot server image created by setup_install_server -b see (install_scripts(1M))

-N NRM_Server:/boot_image_dir
   The complete path (along with the NetWorker Recovery Manager Server name) of the directory containing the complete boot image created by setup_install_server see (install_scripts(1M))
