I enjoyed discussion with her.

My TA was always encouraging participation and notifying the students that she was available to help. Even though I never used it, she made it clear each discussion time.

she did her best to explain everything, however the pace was far too fast and she also goes off on tangents.

Professor Chen was very enthusiastic and enjoyed teaching us, which in turn made class more enjoyable.

I am still confused about why she is here, I look like she has knowledge but she does not know how she can use it in a manner that students can understand her what she is talking about.

The TA was extremely helpful and knowledgeable, however it was difficult to understand some of the things she said during discussion. This did not take away from what we learned, it was just something I had to adjust to coming into class.

learned a lot more than in lectures

Hard to understand, taught too fast.

The explanation of problems during discussion seemed rather lengthy and too fast, and it was very hard to follow along with.

None.

love Li An. So much more helpful than the actual professor

Well prepared for class and gave us the material needed to succeed but was not very good at explaining concepts. Many times the answer to why something was being done was 'because it just is'.

very helpful

Li An is a good person and she is really good at math. However, a lot of times in class it was difficult to follow her math. I don't think this is necessarily her fault though, I think it's because a lot of students just had no idea what they were doing because this course was very difficult. I think this course was more difficult than it needed to be. Sometimes Li An's math was hard to follow, but I think that's because she is so smart and can go very quickly compared to the students. Overall, I really liked Li An, and I feel that she cared about us succeeding.

She struggled to portray knowledge because of her English skills, but she was a great TA.

Li An is very well versed in mathematics but the language barrier in her class was very difficult. She knew enough information to give a lesson but when she was asked questions she did not know how to react very well.

Great teacher, let me understand concepts and their reasons to exist

She was very helpful
