

WEB PAGES - Creating Links -

Notes!

- Create a total of 4 separate files (pages).
 - Name each file
 - Use only lower case file names
 - No spaces in the names
 - Don't forget the HTML extension
- The ANCHOR TAG
`< a href = "link" > Text to display </a>`

Relative Reference

Defines the path to an object using the current location as a the point of reference.

Examples

Same folder

```
<a href="dogs.html"> Click for info on Dogs  
</a>
```

Into a folder

```
<a href="prior/dogs.html">  
Click for info on Dogs </a>
```

Out of a folder

```
<a href="../dogs.html">  
Click for info on Dogs </a>
```

Absolute Reference

Defines the entire path to an object.

```
<a href="http://udel.edu/~frankr/dogs.html">  
Click for info on Dogs </a>
```
